

الحلول

$$\sqrt{10^5} = 10^2 \sqrt{10}$$

I نعلم أن

$$3,16 < \sqrt{10} < 3,17$$

لدينا :

$$10^2 \times 3,16 < 10^2 \sqrt{10} < 10^2 \times 3,17$$

$$316 < \sqrt{10^5} < 317$$

$$316^2 < 10^5 < 317^2$$

إذن الأعداد الصحيحة الطبيعية التي مربعاتها أصغر من 10^5 هي 0 و 1 و 2 و
و 315 و 316 أي 317 عددا

$$S = \frac{5!}{\sqrt{123} - \sqrt{3}} - \frac{-1}{\sqrt{3!} + \sqrt{7}} + \sqrt{6} - \sqrt{7} - \sqrt{123}$$

II

$$= \frac{120}{\sqrt{123} - \sqrt{3}} + \frac{1}{\sqrt{7} + \sqrt{6}} + \sqrt{6} - \sqrt{7} - \sqrt{123}$$

$$= \frac{120(\sqrt{123} + \sqrt{3})}{123 - 3} + \frac{\sqrt{7} - \sqrt{6}}{7 - 6} + \sqrt{6} - \sqrt{7} - \sqrt{123}$$

$$= \sqrt{123} + \sqrt{3} + \sqrt{7} - \sqrt{6} + \sqrt{6} - \sqrt{7} - \sqrt{123}$$

$$= \boxed{\sqrt{3}}$$

$$\begin{aligned} x &< y \\ x^2 &< y^2 \\ bx^2 &< by^2 \\ bx^2 + axy &< by^2 + axy \\ x(bx + ay) &< y(by + ax) \end{aligned}$$

$$(2) \quad \boxed{\frac{x}{y} < \frac{ax + by}{bx + ay}}$$

$$\begin{aligned} x &< y \\ x^2 &< y^2 \\ ax^2 &< ay^2 \\ ax^2 + bxy &< ay^2 + bxy \\ x(ax + by) &< y(ay + bx) \end{aligned}$$

$$(1) \quad \boxed{\frac{ax + by}{bx + ay} < \frac{y}{x}}$$

$$\boxed{\frac{x}{y} < \frac{ax + by}{bx + ay} < \frac{y}{x}}$$

من (1) و (2) نستنتج أن :

III

IV

$$\begin{aligned}
 P &= \left(1 - \frac{1}{4}\right) \left(1 - \frac{1}{9}\right) \left(1 - \frac{1}{16}\right) \dots \dots \dots \left(1 - \frac{1}{625}\right) \\
 &= \left(1 - \frac{1}{2}\right) \left(1 + \frac{1}{2}\right) \left(1 - \frac{1}{3}\right) \left(1 + \frac{1}{3}\right) \left(1 - \frac{1}{4}\right) \left(1 + \frac{1}{4}\right) \dots \dots \dots \left(1 - \frac{1}{25}\right) \left(1 + \frac{1}{25}\right) \\
 &= \left[\left(1 - \frac{1}{2}\right) \left(1 - \frac{1}{3}\right) \left(1 - \frac{1}{4}\right) \dots \dots \dots \left(1 - \frac{1}{25}\right)\right] \left[\left(1 + \frac{1}{2}\right) \left(1 + \frac{1}{3}\right) \left(1 + \frac{1}{4}\right) \dots \dots \dots \left(1 + \frac{1}{25}\right)\right] \\
 &= \left(\frac{1}{2} \times \frac{2}{3} \times \frac{3}{4} \times \dots \dots \dots \times \frac{24}{25}\right) \left(\frac{3}{2} \times \frac{4}{3} \times \frac{5}{4} \times \dots \dots \dots \times \frac{26}{25}\right) \\
 &= \frac{1}{25} \times \frac{26}{2} \\
 &= \frac{1}{25} \times 13 \\
 &= \boxed{\frac{13}{25}}
 \end{aligned}$$

V

لدينا :
 $AB < OA + OB$
 $BC < OB + OC$
 $CD < OC + OD$
 $AD < OA + OD$

$$\begin{aligned}
 p &< 2(OA + OC) + 2(OB + OD) \\
 p &< 2AC + 2BD \\
 p &< 2(AC + BD)
 \end{aligned}$$

(1) $\boxed{\frac{1}{2} p < AC + BD}$

$AC < AB + BC$: في المثلث ABC
 $AC < AD + CD$: في المثلث ACD

$$\begin{aligned}
 2AC &< AB + BC + AD + CD \\
 2AC &< p
 \end{aligned}$$

$$\boxed{AC < \frac{1}{2} p}$$

$$\boxed{BD < \frac{1}{2} p}$$

نبرهن بنفس الطريقة أن

بما أن $AC < \frac{1}{2} p$ و $BD < \frac{1}{2} p$ فإن : $AC + BD < \frac{1}{2} p + \frac{1}{2} p$

(2) $\boxed{AC + BD < p}$

من (1) و (2) نستنتج أن : $\boxed{\frac{1}{2} p < AC + BD < p}$
