**COMPREHENSION 7PNTS**

**THE BEST ANTIVIRUS**

**1** When hackers break into government servers to steal your personal data, there's not a darn thing you can do about it. Protecting those servers isn't your job. What you can do is ensure that your own devices are protected against data-stealing Trojans and other sorts of malware by installing antivirus protection. Which antivirus should you use? We'll help you decide.

Data-stealing Trojans aren't the only type of attacker your antivirus will block. Despite the name, these utilities protect against a huge range of malicious programs, including ransomware, spyware, adware, keyloggers, rootkits, Trojans, actual viruses, and more. Fortunately, you can also find a huge range of products designed to fight these malicious programs. PCMag has reviewed over 30 different commercial antivirus utilities, and that's not even counting free antivirus tools. Ten of the premium editions proved effective enough to earn an excellent four stars or better. Another dozen earned at least three stars.

**3** Almost all of these products are traditional, full-scale, antivirus tools, with the ability to scan files for malware on access, on demand, or on schedule. A couple are outliers tools meant to enhance the protection of a traditional antivirus. As for just relying on the antivirus built into Windows 8.x, that's not such a good idea. According to both our tests and independent lab tests, Windows Defender won't keep you safe.

**What's Best?**

**4** Which antivirus should you choose? Webroot *SecureAnywhere* Antivirus is the tiniest antivirus around, though its unusual detection technique doesn't jibe with some lab tests. The independent labs uniformly heap praise on *Kaspersky Anti-Virus*. *Bitdefender Antivirus Plus* also gets plenty of love from the labs, and in AutoPilot mode it stays out of your way. We've named these three Editors' Choice for commercial antivirus, but they're not the only good choices. In general, anti-virus users usually make their choices according to price-quality combination.

**A. Read the passage and answer the question: 2PNTS**

1. What makes an antivirus so important? .....
2. Which abilities do modern antiviruses have? .....

**B. Find in the passage words that mean the same as: 2PNTS**

- |                                      |                                 |
|--------------------------------------|---------------------------------|
| 1. Computer breakers: (pragh1) ..... | 2. Harmful: (pragh2) .....      |
| 3. Improve: (pragh3) .....           | 4. Laboratories: (pragh4) ..... |

**C. What do the underlined words in the passage refer to: 1.5PNTS**

1. These utilities: .....
2. Malicious programs: .....
3. These three: .....
