The Evolution of Food Production

Just as society has evolved over time, our food system has also evolved into a global system of immense size and complexity. As this system has drastically changed, from one centered around family food production on individual farms and home food preservation to the modern system of today, most people are not connected to their food nor are they familiar with agricultural production and food manufacturing designed for better food safety and quality. Yet, thanks to our current production-to-consumption system, what we eat is largely safe, tasty, nutritious, abundant, diverse, convenient, less costly and more readily accessible than ever before.

A. Répondre à la question suivante basée sur le texte que vous venez de lire :

How are our eating habits affected by modern food production? Give examples to support your answer.
