## II. Reading Comprehension

## 1) Read the text carefully and fill in the blanks with the word below that best fits the text.

## Space solar power

It is an idea far $\qquad$ of its time, but the necessary technology $\qquad$ 52 $\qquad$ exists.

These studies usually conclude that there is $\qquad$ 53 $\qquad$ technical barrier to implementing SSP. For example, a $\qquad$ 54 $\qquad$ published in 1981 by the Department of Energy, NASA, the Environmental Protection Agency and the Department of Commerce found "no showstoppers" or "insurmountable obstacles" to the idea. But further development work has___55__ fallen between the cracks of different agencies. "The trouble is that the Department of Energy doesn't do __56__, and NASA does space, not__ 57__," says Colonel M.V. ("Coyote") Smith of the National Security Space Office (NSSO), a Pentagon think-tank, who $\qquad$ 58 $\qquad$ conducted another study of SSP.
$\qquad$
$\qquad$ there may not be any technical difficulty with the $\qquad$ 60 $\qquad$ the economics are another matter. The $\qquad$ 61 $\qquad$ obstacle to SSP is the huge cost of $\qquad$ 62 the satellites into space. Conventional electricity in America costs between four cents per kilowatt hour ( kWh ) for hydro-electric power (the__63__kind) and ten cents for coal-fired generation. Even under the most optimistic scenario, SSP would produce electricity at a cost of around 50 cents per kWh with existing technology. It sounds ___64__. ___65__ developments mean that advocates of SSP are more optimistic than ever before.

Space solar power is still an idea far ahead of its time. But the necessary technology already exists and is $\qquad$ 66 $\qquad$ falling in cost. The commercialisation of space-and, in particular, the enthusiasm building around space tourism -could be the trend that brings $\qquad$ 67 $\qquad$ launch costs and brings SSP _68 $\qquad$ reach. It will take entrepreneurs as well as engineers to kick-start the public-private process needed to tap the energy of the great fusion reactor in the sky. Lots of people believe it can be done. But as Cutie the robot demonstrated, what you believe $\qquad$ 69 $\qquad$ less than what you $\qquad$ 70 $\qquad$
